AI-Based Priced Estimation System

By: Manmeet Gill, Sidarth Shahri, Manpreet Singh, Karthik Tella

Expo Topics

- **Problem and Solution:** Explain the problem we are trying to solve
- **Approach and Implementation:**
 - Data collection
 - Machine learning
 - Back-end and front-end applications
- **Demo:** An interactive demo at our table
- **Conclusion:** What we learned

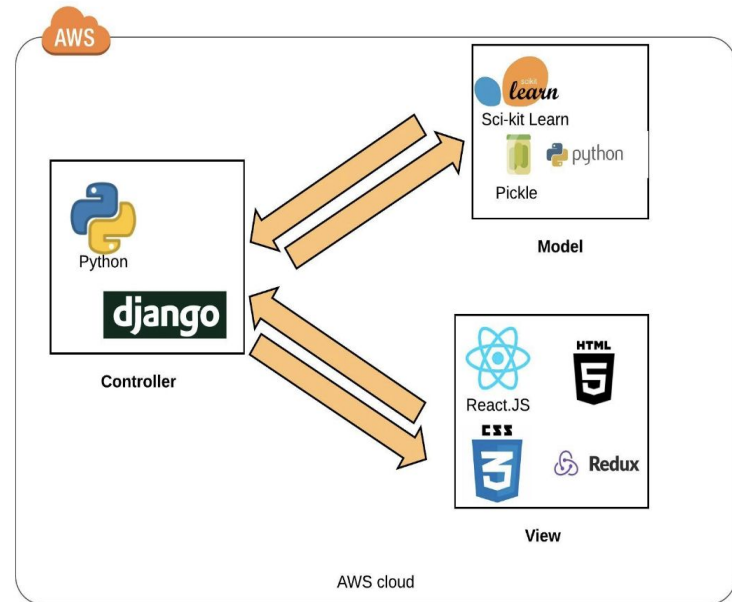

Problem and Solution

- **Problem:** No analytics available for second hand sales on online marketplaces
 - Consumer unfamiliarity with second hand product prices
- **Solution:** A user friendly tool that provides price analytics based on a machine learning model trained on web scraped ads from online marketplaces
- **Goals and Deliverables:**
 - Accurate data collection, cleaning and processing
 - A trained machine learning model
 - User friendly application
 - A project report detailing our efforts

Approach and Implementation

- Data Collection
- Data Cleaning and Preprocessing
- Applying Machine Learning
- Making Backend API
- Front End Development

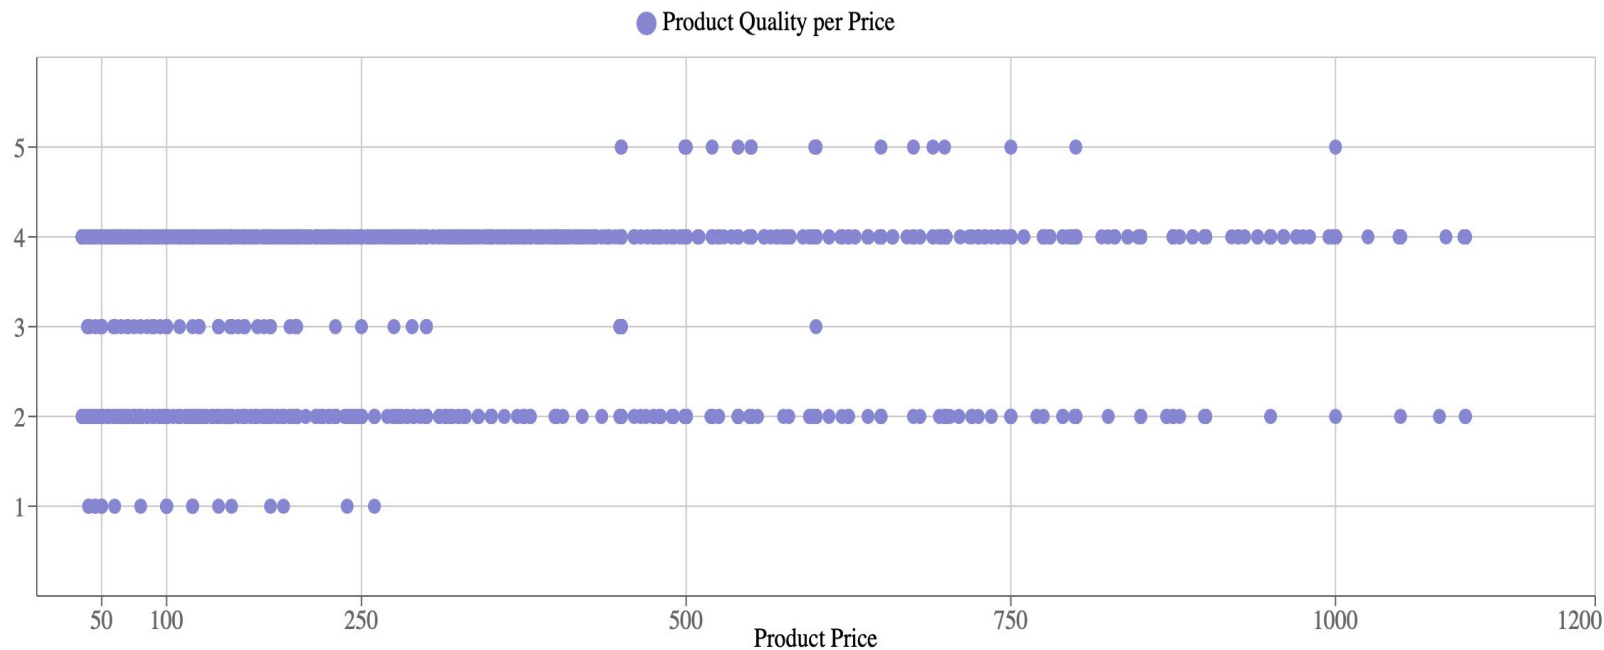

Dataset

BRAND	COLOUR	CONDITION	CONTRACT	MEMORY	MOBOS	MODEL	PRICE
Samsung	gray	like new	Sprint	256	android	S8 PLUS	\$270.00
Blu	red	like new	Unlocked	16	android	Y85	\$50.00
Samsung	Black	Good	Verizon	32	android	S10 plus	\$745.00
Apple	gray	like new	T-Mobile	64	apple iOS	iPhone 8 Plus	\$400.00

\$189

Conclusions

- We successfully implemented our design and delivered a working project and a report
- KNN is the best approach for regression on categorical values
- Categorical data needs to be preprocessed before fitting the model
